The links above generate eight datasets of six columns. Each dataset contains the same columns: Award ceremony, Year, Category, Nominee(s)/work(s), Result, and Ref. The numbers of rows differ for each since each dataset represents the wins and nominations of different Korean Pop groups. All the groups involved belong to the record label JYP Entertainment. Though they are not the only groups under the label, I selected these due to the fact that they are the most popular under the label. I wished to see which of the groups garnered the most traction for the company, as well as if certain genders did better than others.

The above graph plots the number of wins won by each group per year. Due to the nature of the numbers, the graph was put on a Logarithmic scale in order to facilitate the demonstration of visual differences between the groups. Certain dots start randomly due to the fact that not all the groups debuted at the same time, and thus, their capacity to win could only come after. What we see here is that 2PM is the oldest active group that has not seemed to win much if any awards in recent years. In comparison, Stray Kids began winning awards in 2018 and appears to be the only group that demonstrates a positive incline. Twice is the only other group that demonstrated a steady incline from 2015 to 2018, though that took a dip after said year. From the graph alone it appears that the groups in JYP are most probable to win the most awards of their career two or so years after their debut. This would serve as an explanation for why the company is constantly creating groups to debut two or so years after the success of one.

The Contribution of Each Group's Wins to their Company

Of the stated groups, their wins over the duration of their active career were summed up and aggregated to this chart. This was done so to demonstrate that from 2008 to 2025, of these eight groups alone, who contributed the most to JYP Entertainment. The results show that Stray Kids and Twice make up the grand part of the awards won, telling us that they are the most popular groups of JYP. NMIXX and Xdinary demonstrate the least due to the fact that they are some of the youngest groups, having debuted in 2021 and 2022. However, what is interesting is that 2PM, despite having the longest run, has produced less than groups that debuted after them. This graph also demonstrates that JYP invests more in boy groups than girl groups though they are also capable of competing in terms of numbers.

Now this graph plots the total wins by total nominations each year, for each group. Every dot represents a year. The regression lines demonstrate the “win rate” of each group by comparing the wins they did get to those they were nominated for. If several of the dots lie close to the line, then the group is consistent in its ability to win the awards it’s nominated for. Of those Stray kids appear to be the only one that has dots actually fallen onto the line twice. In regard to efficiency, the steeper the line the more efficient a group is. The steepest apparent line belongs to Day6; demonstrating that they are the most efficient group. This could be because of the few nominations they do get, they manage to win the most of them. Which contrasts with groups like Twice and Stray Kids that get many nominations and win a handful of them every year.
